- *Chain of Custody - Courtroom Tested*
- *Complete Control over Disposal of Evidence*
- *Extensive Reporting Included*

# Evidence Manager

Version 4.0 for Windows™

**E**vidence Manager by the PERCS Index is designed to provide immediate access to information and maintain a chain-of-custody log on all items under Property Room control. This is achieved through the use of Windows™ technology, sophisticated database design and utilization of proven bar code technology. The increased efficiencies and tighter controls provided by Evidence Manager help to ensure the integrity of all evidence for prosecution and disposal purposes.

## Bar Code Technology

**B**ar code technology provides a rapid and simple method of data collection that is extremely accurate. Additional information such as Description, Officer # and Name, Date etc. are included on the label to further aid in the fast identification of the item. A signature field can also be included if required.

## Chain of Custody

**E**vidence Manager controls all items of evidence and property coming into custody and records every movement of that evidence until final disposition or disposal. Signature bearing receipts can be easily created for an additional audit trail if required. Courtroom ready reports are also an integral part of Evidence Manager.

## Inventory Control

**P**hysical Inventory of items in custody is made simple by using bar code technology and a hand held data terminal. Counting time is dramatically reduced over manual methods. Standard inventory reports quickly highlight any discrepancies and ensure that all items are in their correct place.

## Evidence Manager 4.0 Components

Basic Package includes:

- Evidence Manager 4.0 software
- One year of Technical Support
- Network Remote Module for use on a network
- Field Module for use on a remote PC
