

Digital Photo Module

Evidence Manager by the PERCS Index, now has an optional module that allows a user to store and retrieve digital images for any item that is under Evidence Manager control. Authorized users will now have the ability to view images of any item of evidence without having to actually go to the Evidence room. Items that have an image available will have an icon that indicates that one or more images are available for this item. Simply clicking on that icon will cause the image to appear. Multiple images can be attached to any item.

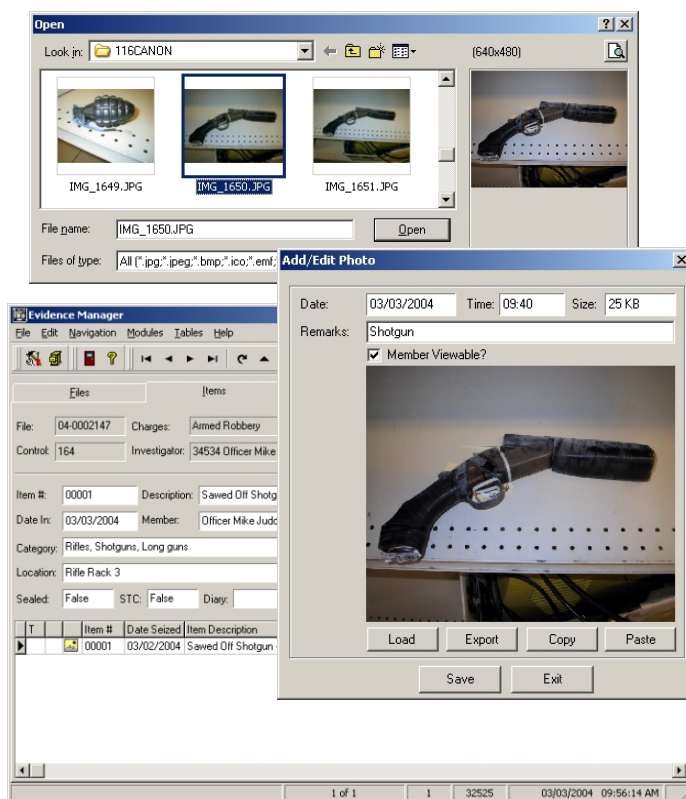

Simple to Use

Stored images with a bitmap (.bmp) or .jpeg format can be easily associated with any item under Evidence Manager control. The simple procedure is as follows:

- Select a case file
- Select the item of evidence that you want to associate an image with.
- Select the **Photos** button and a screen will appear that prompts you to locate your image(s).
- After one or more images have been saved with an item, an icon  will appear beside the description of the item to indicate that images are available.
- | P | Item # | Date Seized | Item Description |
|---|--------|-------------|------------------|
|  | 00001 | 03/22/2004 | Marijuana |
- Select the icon and the images will be presented.
- The images can be enlarged to full screen for better viewing. They can also be copied or exported.

Sample Screens

Using Images

Images that have been stored in Evidence Manager can be retrieved for viewing, export or printing. These images can also be stored with their individual descriptions. A printed report would include the image, description and case and item number. Case files that have been closed and evidence destroyed can also be archived. The images will then continue to provide a record for future reference purposes.
